

# Wireless Dispatch

**Q**uestar InfoComm's (QIC) digital paging system provides numeric and alphanumeric messaging through out Utah, Southwestern Wyoming and Western Colorado. Easy telephone access provides fast numeric and text messaging to your employees in the field. Paging provides an excellent way to notify on-call personnel without being tied to a phone or having to provide a cellular telephone. Paging is an economical alternative to cellular service. QIC's paging system can also provide remote signalling capabilities to reset computers or activate and deactivate electronic systems.

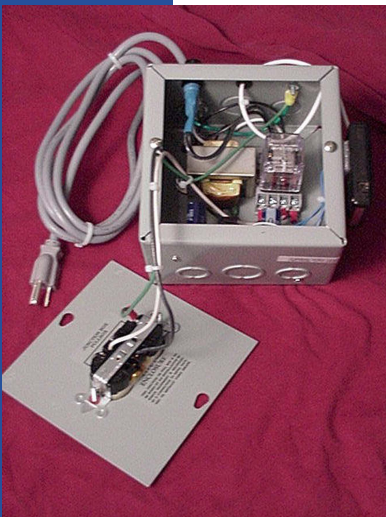

## Benefits of Questar InfoComm's Digital Paging

- 24 x 7 x 365 monitoring & testing by our Technical Operations Center
- Call detail reports, number of pages, number of characters
- Redundant paging terminal and overlapping coverage for high reliability
- Customer Service Center for subscriber questions and equipment changes
- Factory trained technicians
- Emergency backup power on all transmitter sites

## Remote Reset Switchbox

Questar InfoComm has developed its own remote reset device. It operates using Questar's multi-state paging system and can reach most remote locations you may require. Custom design, private paging system, and password access, insure that your system will only be reset when you want it. The reset box operates off any normal household power and will save countless trips to "fix" your remote equipment.

It will save you time to travel to a remote location just to power cycle that stubborn modem or hit the reset button on that controller that locks up for unknown reasons. Cost savings on expensive overtime pay for just flipping a switch off and back on can add up quickly, not to mention expensive bad weather travel in helicopter or snow cat vehicles. It also eliminates the down time of customers equipment and reduce unsatisfied customers for service interruptions.
